

ES6

Task07

Write a js program for map function.

Create a function with one parameter which will accept a number. * Inside the function: * You have to calculate the sum of **all perfect square numbers** till the given number. * Perfect squares are the numbers whose square root is a natural number. * For eg - If number is 10, the sum of all perfect squares before the number is $1 + 4 + 9 = 14$.

- Then, create a map with key as **perfect_square_sum** and value you have *calculated earlier*. Then, return this map.
 - Export your function using `module.exports`.
